

## Winning Architects choose BT Bamboo Flooring

Architects aspire to winning one of the prestigious awards from the Australian Institute of Architects National Awards. In 2008 the Award for Public architecture went to m3architecture for the Brisbane Girls Grammar School and the Award for residential architecture went to McBride Charles Ryan for The Klein Bottle House.

BT Bamboo Light Sand was used in both of these projects!

Bamboo Flooring is receiving increased attention from architects, designers and specifiers. Sustainability has become a driving force in commercial design. Bamboo gives the lustrous presence brought to a room by a natural flooring product that is as hard as nails, stylish, and truly eco friendly.

The solid bamboo tongue and groove boards are available pre-finished in gloss, satin or commercial – or raw, for on-site staining. The tough seven layer German coating system is as eco friendly as the material itself.
