

## Commercial coating for BT Bamboo

**Eco Flooring Systems** has developed a special commercial coating for the **BT Bamboo** used in high traffic retail applications such as office lobbies, shops and cafes. The slightly textured surface of the commercial coating increases the slip resistance required in public areas and the extra aluminium oxide in the coating increases the durability and strength of the coating.

BT Bamboo is a pre-finished solid bamboo wide tongue and groove floor board (152 x 1830 x 15mm) available in horizontal or vertical construction that is easy to install and able to walk on the next day.

BT Bamboo pre-finished in commercial coating is ideal for cafe installations that have high traffic and constant wear and tear. BT

Bamboo has also been installed in busy office lobbies, retail shops and motor show display floors and customers are delighted with the results.

Eco Flooring systems says its BT Bamboo flooring is stronger, harder and more stable than most other hardwoods being equal in hardness to jarrah and tallowwood.

The coatings are all water based with zero emissions. High performance coatings (HPC) are applied as multi-layer systems by roller coating technology and cured by ultra violet (UV) energy. The coatings yield extreme hardness resulting in high mechanical resistance to scratch, impact and abrasion.

An Australian owned company operating since 1996, Eco Flooring Systems

has a proven track record in supplying high quality BT Bamboo flooring including high profile installations such as Lend Lease, **AQIS**, **the Chinese Consulate**,

**the Beach Club Resort** and **David Jones** to name a few. Eco Flooring is the exclusive distributor of BT Bamboo flooring in Australia. ■
